v1.0 August 2018

Introduction:

Investing in the masternode eco-system can be complex and difficult. And when you finally find something worthy of an investment you still need to monitor and maintain the investment. NodeLife aims to make your life with masterndoes easier. In our platform you can keep all your coins for masternode rewards and staking at once. NodeLife is a cloud based decentralized storage for all your coins. When using the platform you are set for a care and hassle free life with your masternode investments. The platform takes care of everything for you. NodeLife is a combination of many things. Masternode hosting, staking pool, monitor service, cloud service deployment... You name it, chances are you will find it within our platform!

Since the inception of the system of masternodes was first implemented by DASH, the cryptocurrency space has seen what can only be described as a frenzy of interest in and around the masternode coin ecosystem. Investors seem to be attracted to the fact that masternodes allow anyone holding a specified balance of a particular coin, to collateralize their coins and use them to earn a passive income.

By owning a node in the NodeLife platform it will allow its users to get exposure to a variety of different masternode coins as the masternodes and coins in the platform is open for view by any user. This allows investors to reap the benefits of research and technical preparation without having to do it all themselves.

The NodeLife blockchain:

The NodeLife blockchain will be an energy-efficient blockchain, operating on a Proof-of-Stake consensus mechanism and will make use of a system of masternodes. The exact specifications are as follows:

Coin Name: NodeLife
Ticker: NLF
Coin Type: PoS+MN
Algorithm: Quark
Block Time: 65 sec
Block reward distrubution: 50% MN 50% Pos at start.
Minimum confirmations: 11
Staking maturity: 60 min
Masternode collateral: 5 000 NLF
RPCport: 52311
Port: 52310
Premine: 150 000 NLF
Total Supply: 8 000 000 NLF

The block rewards are subject for change if requested by the community. We realize the implications of such a distribution considering our low supply, but we would like to try it. We expect a high percentage of the coins to be locked up in masternodes quickly! Thus increasing both demand and price.

Premine:
150 000 NLF coins will be premined. This is earmarked to further the development and exposure of this project. Listing on exchanges, marketing and promotion is top priority the first year. Presale will also be taken out of this. We will allow staking of the premine in the beginning but once we have reached our target for the marketing budget we will stop staking.
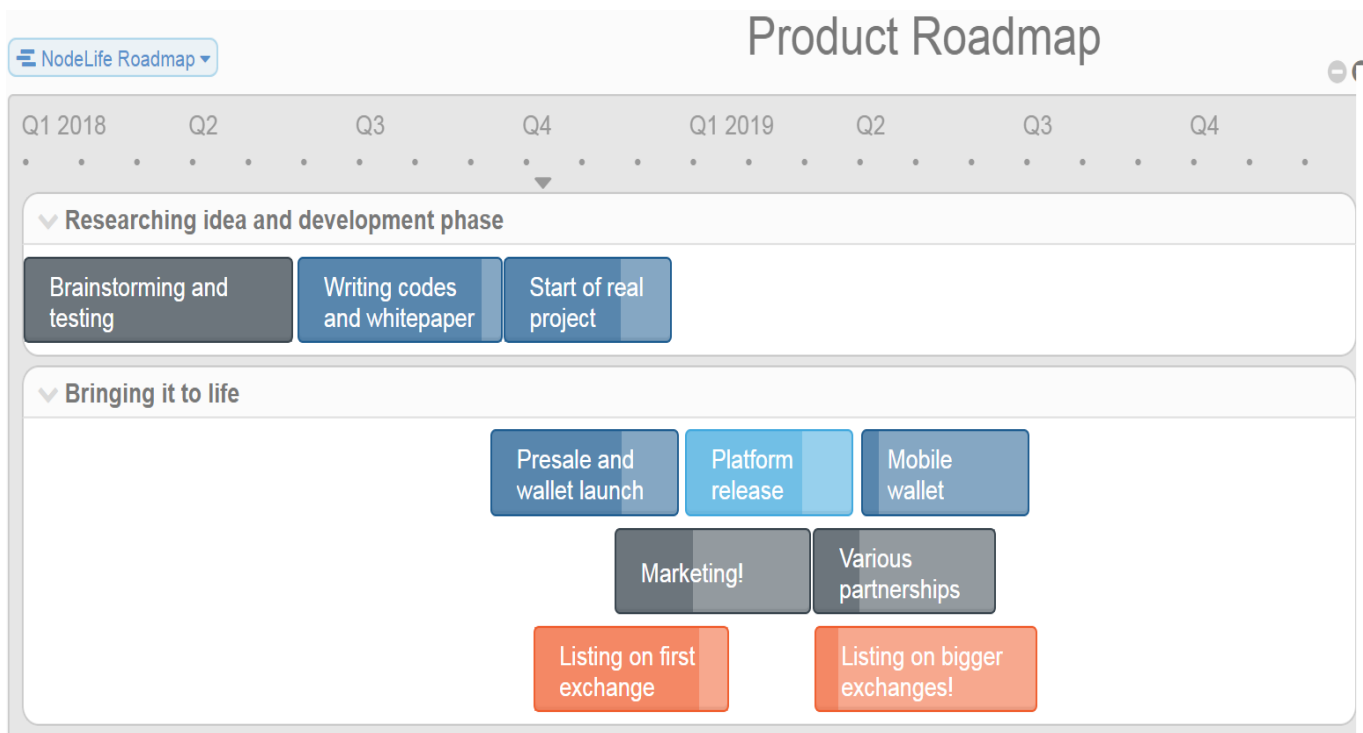

Security measures for all:

Know Your Customer (KYC): Unlike MNO, MNPro, MNCN or any other masternode listing service/site, NodeLife is offering a KYC option for projects who list on our Masternode Listings page. As the customer of NodeLife, any project that wishes to participate in our NCX Approval Program and receive our "NodeLife Verified" badge can do so by following standard KYC protocol and submit the required additional documentation with their listing application. KYC project applicants will be asked to provide proof of identification by valid government issued ID such as passport, or driver's license. Verified coins have distinguished themselves from other coins and will rightfully be listed separately under KYC Verified Projects.

Transparency Policy: We aim to provide our users with an open and transparent experience for the entirety of their dealings with NodeLife. For this reason, it goes without saying that we understand the best way to build trust and support amongst a community is to be completely transparent in every aspect of doing business.
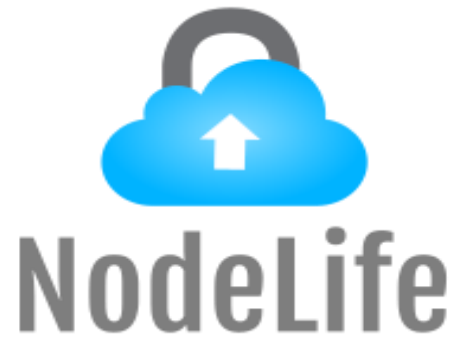

ROADMAP:

The idea of NodeLife started early 2018. Over the coming months the thoughts grew into a project that now is finally ready for the real world. We spent all summer and fall working specifically on this, and we are finally ready to launch! After this announcement and whitepaper goes live we are opening up our Discord and Telegram server. The Discord server will be our main way of communicating with our investors. We also released a website with most info on. This project has started very well already. Platform design is almost ready and the WHMCS API implementations needed for the time are in place.

This work as well as the presale, wallet launch and first exchange listing covers the main goals we have set for the remainder of this year (2018). This allows us to focus on the last goal once we get the presale underway; the first exchange listing. Once we have secured that we will move on to more heavy marketing. And in Q1 2019 we aim to release the actual platform for every user around the world. Our early investors will be given a version of it before that as a thank you. In Q2 2019 we will focus more on bringing out the mobile apps, which will of course support both Android and iOS. By then bigger exchanges and big partnerships is also among our goals. We will eventually aim for the top!
